**CLINICAL DIAGNOSIS / SYMPTOMS / HISTORY**

Baby Aakash is suspected to be affected with retinoblastoma and has been evaluated for pathogenic variations in the RB1 gene

**OCEAN WELFARE FOUNDATION**

LET'S MAKE A CHANGE TOGETHER

**RESULTS**

**PATHOGENIC VARIANT CAUSATIVE OF THE REPORTED PHENOTYPE WAS DETECTED**

**SNV(s)/INDELS**

Gene* (Transcript)	Location	Variant	Zygosity	Disease (OMIM)	Inheritance	Classification <sup>†</sup>
<b>RB1 (+)</b> (ENST00000267163.6)	Exon 1	c.1666C>T (p.Arg56Ter)	Heterozygous	Retinoblastoma (OMIM#180200)	Autosomal dominant	Pathogenic (PM1, PM2, PM3)

Parental testing is strongly recommended, and classification of the variant may change based on segregation analysis.

**COPY NUMBER VARIANTS CNV(s)**

No significant CNVs for the given clinical indications that warrants to be reported was detected.

**VARIANT INTERPRETATION AND CLINICAL CORRELATION****VARIANT (RB1 gene):**

**Variant description:** A heterozygous nonsense variant in exon 1 of the RB1 gene (chr13:g.4881414C>T; Depth: 243x) that results in a stop codon and premature truncation of the protein at codon 56 (p.Arg56Ter, ENST00000267163.6) was detected (Table). The observed variant has previously been reported in patients in heterozygous state affected with Retinoblastoma [PMID: 25602518, ClinVar: VCV000013090.14]. This variant has not been reported in the 1000 genomes, gnomAD (v3.1), gnomAD (v2.1) and topmed databases and has a minor allele frequency of 0.00134% in our internal database. The in-silico prediction<sup>‡</sup> by MutationTaster2 is damaging. The reference codon is conserved across species.

**OMIM phenotype:** Retinoblastoma (OMIM#180200) is caused by heterozygous mutations in the RB1 gene (OMIM\*614041). Retinoblastoma (RB) is an embryonic malignant neoplasm of retinal origin. It almost always presents in early childhood and is often bilateral (PMID: 18852623).
